

STYLDOD, INC.

AI Output Notice and Transparency Statement

Enterprise Policy Document

Document ID	AI-001
Version	v1.0
Effective Date	June 2026
Document Owner	Senior Leadership / Engineering Leadership
Applies To	Enterprise embedded integrations, customer data, production systems, and all authorized personnel

Purpose and Scope

This statement provides enterprise customers with recommended user-facing transparency language and internal rules for AI-generated or AI-assisted outputs delivered through Styldod embedded integrations. It applies to enterprise workflows involving visual redesign, virtual staging, image editing, landscaping, exterior visualization, product discovery, or similar AI-assisted property visualization experiences.

Transparency Position

Outputs generated or modified through the enterprise embedded workflow should be presented as AI-generated, AI-assisted, or digitally modified where required by customer policy, platform rules, MLS rules, applicable law, or responsible product practice.

Recommended End-User Notice

The following sample notice may be adapted by enterprise customers and their legal teams:

Sample: This visualization is AI-generated or AI-assisted and is provided for design inspiration and visualization purposes only. It may not represent the exact current condition, dimensions, materials, availability, pricing, or final appearance of the property or products shown. Please verify all details independently before making decisions.

Use Limitations

- Outputs are for visualization, design assistance, marketing support, or workflow assistance only.
- Outputs must not be treated as property condition reports, inspection reports, appraisals, warranties, legal advice, financial advice, or construction documents.
- Outputs may contain errors, visual inconsistencies, unrealistic product placements, or generated elements that require human review before use.
- Real product discovery, pricing, availability, delivery, and installation information must be verified through the applicable retailer, supplier, or service provider.

No Automated Legal or Significant Decision-Making

The enterprise embedded service does not make automated decisions about individuals that produce legal effects or similarly significant effects. It does not determine housing eligibility, credit approval, loan approval, employment, legal rights, access to essential services, or regulated personal decisions.

Customer Responsibilities

- Enterprise customers control the end-user relationship and are responsible for determining the final user-facing notice, placement, wording, and consent or legal basis where required.

- Enterprise customers must inform Styldod of any MLS, portal, marketplace, consumer protection, advertising, or AI transparency requirements that apply to the deployment.
- Where a customer controls the AI model endpoints, the customer is responsible for any model-specific user notice, retention settings, and model-level compliance obligations unless otherwise agreed.

Styldod Commitments

- Styldod will not use enterprise customer personal data or customer production data to train unrelated public AI models unless expressly agreed in writing.
- Styldod will not use enterprise customer personal data for direct marketing unless expressly agreed.
- Styldod will support inclusion of AI output notices in the embedded experience where technically feasible and agreed in the implementation scope.
